- Sanity & Integration Testing

## WORKING EXPERIENCE

**Quality Analyst- 3PLEARNING, NORTH SYDNEY, AUSTRALIA**  
(Full-Time) Jan 2018- present; (Casual) May 2015- Dec 2017

- Creating scenarios with test cases in web-based test management tool- I am responsible in creating multiple scenarios within the software to find full coverage of the products
- Experience in creating and documenting user stories, to alleviate my product manager's vision in expecting features to be created- I have experience in helping the business analyst and product owner to create user stories and communicate with the relevant stakeholders
- Working with MySQL database- I have experience in creating mock data for testing, creating queries to validate data and testing with large dataset
- Creating and executing automated tests with Postman in Javascript- I am responsible for developing and executing automated API testing of a software (other tools include WCF Client and Widdler)
- Execute all levels of testing such as functional, regression and user acceptance testing- I practise this on a daily basis and have a strong knowledge in a product's life cycle
- Detect and track software defects and inconsistencies- I have experience in debugging issues during the testing phase in different environments
- Atlassian software knowledge in documenting business rules, acceptance criteria, bugs, tasks and improvements- I am responsible to record user stories in the confluence page and report any defects in Jira
- Experience in Agile Methodology and Scrum – I am involved in daily stand up to keep track of assigned tasks and identify any impediments to ensure that we can complete our tasks efficiently and in a timely manner
- Use of company deployment tools – I have experience in using the internal tools to deploy product content in different environments
- Ensure XMLs are in the correct format – I have experience in decoupling the data of content to see and provide any errors
